

ENTERPRISE CLOUD VENDOR

Customer Experience and Real-World Usage Report

Compiled by: Meridian Logistics Procurement Team | May 2026

Sources: Reference calls, G2 Enterprise reviews, Gartner Peer Insights, direct client interviews

This document compiles verified customer experience data from enterprises using each of the five shortlisted vendors. All interviews were conducted under NDA. Company names have been anonymised. Data was collected between February and April 2026.

SECTION 1: CloudPrime Enterprise — Customer Experiences

1.1 Positive Experience — PanEuro Freight GmbH (Hamburg, 9,000 employees)

Industry: Logistics | Use Case: SAP S/4HANA migration + microservices platform | Duration: 18 months

[POSITIVE] Migration completed 2 weeks ahead of 12-week schedule. CloudPrime SAP Migration Factory team of 6 were exceptional — daily standups, transparent progress tracking on shared dashboard.

[POSITIVE] SAP HANA performance improved by 43% vs previous virtualised environment. Month-end processing time dropped from 6.2 hours to 3.4 hours — significant operational impact for finance team.

[POSITIVE] P1 incident response: tested twice in 18 months. Average response time was 11 minutes — well within the 15-minute SLA. Both incidents resolved within 2.5 hours.

[POSITIVE] Zero egress fees between EU regions saved an estimated €180,000 in Year 1 vs our previous provider.

[POSITIVE] The TISAX Level 3 certification was critical for our BMW and Volkswagen accounts. CloudPrime had it ready on Day 1 — no waiting period.

[POSITIVE] Kubernetes (CKS) required zero additional tooling. Our DevOps team of 3 manages 47 microservices on CKS with minimal overhead.

Pain Points:

[NEUTRAL] The dedicated TAM sometimes takes 4-6 hours to respond to non-urgent queries during peak periods despite being "dedicated". Would benefit from a secondary contact.

[NEUTRAL] Cost dashboard UI is functional but not as polished as NexaAI. Finance team requested better tagging capabilities — resolved in Q1 2026 update.

[NEUTRAL] Initial onboarding documentation was dense. Required 3 dedicated days to fully understand the network configuration options.

Overall Score: 4.6/5.0 | Recommended: YES

1.2 Negative Experience — LogiTrans Central (Vienna, 3,200 employees)

Industry: Road Freight | Use Case: Data warehouse migration | Duration: 8 months

[NEGATIVE] Our experience was mixed. Migration went smoothly but the post-go-live period had 3 unplanned outages in the first 60 days — not related to SLA breach but operationally disruptive.

[NEGATIVE] The Platinum Support tier we were promised had TAM availability issues — our named TAM went on extended leave 6 weeks after go-live and replacement was less experienced.

[NEGATIVE] Billing complexity: despite the "zero egress" promise, we discovered data transfers to our on-premise backup systems were charged. Contract language was ambiguous on this point. Disputed €28,000 charge — eventually resolved in our favour but took 6 weeks.

[NEGATIVE] CKS had a Kubernetes version upgrade that broke 2 of our custom operators. CloudPrime support was responsive but the 72-hour resolution time impacted 1 application for 3 days.

Pain Points that were resolved:

[POSITIVE] Both billing dispute and CKS operator issue were resolved — credit issued. CloudPrime did take accountability.

[POSITIVE] TAM continuity issue: raised with account director and a permanent replacement was assigned within 2 weeks.

Overall Score: 3.4/5.0 | Recommended: CONDITIONALLY (ensure TAM continuity clause in contract)

1.3 Neutral Experience — Freight Alliance Network (Rotterdam, 6,500 employees)

Industry: Freight Forwarding | Use Case: Full infrastructure migration | Duration: 24 months

[NEUTRAL] CloudPrime is genuinely strong but the experience depends heavily on which migration team you get assigned. We had a strong team for SAP and an average team for the network migration.

[NEUTRAL] Support quality is excellent for P1 incidents but P2 and P3 issues get deprioritised. We have 4 open P3 tickets that are 3+ weeks old.

[NEUTRAL] TISAX compliance was a genuine differentiator for our automotive accounts. Saved us from losing the BMW account during a compliance audit.

[NEUTRAL] Cost has been predictable — no billing surprises beyond one egress clarification in Month 2. Overall TCO tracking 8% below estimate.

[NEUTRAL] The CKS platform is solid for standard Kubernetes workloads. We have not pushed it to limits but day-to-day operations are smooth.

Overall Score: 4.1/5.0 | Recommended: YES with contract protections

SECTION 2: NexaCloud Platform — Customer Experiences

2.1 Positive Experience — Nordic Logistics Partners (Stockholm, 4,800 employees)

Industry: Logistics | Use Case: SAP + AI demand forecasting | Duration: 14 months

[POSITIVE] NexaAI platform is genuinely transformative. The CostIntelligence tool identified €340,000 in unnecessary reserved instances within 30 days of go-live. This alone justified the NexaAI Platform cost for 2 years.

[POSITIVE] Demand forecasting model deployment was 60% faster than our previous on-premise environment. GPU cluster availability on-demand was a major operational benefit.

[POSITIVE] Migration timeline: 16 weeks as promised. No surprises. Project manager was excellent and provided daily updates.

[POSITIVE] The NexaAI OptiScale has reduced our compute bill by 31% since go-live through intelligent right-sizing. The ML-driven scaling actually works better than rule-based systems we tried before.

[POSITIVE] Support quality at Enterprise tier: good for P1, average for P2/P3. We upgraded to Premium Support (+€95,000/year) and P1 response dropped from 30 to 14 minutes average.

Pain Points:

[NEGATIVE] Shared TAM model at standard Enterprise tier is frustrating. Our TAM manages 3 clients simultaneously — during NexaCloud platform updates we sometimes wait 6-8 hours for responses.

[NEGATIVE] TISAX gap is a real problem. We lost one potential automotive client who required TISAX as a procurement condition. NexaCloud interim controls documentation was not accepted.

[NEGATIVE] Frankfurt second availability zone not available during our first 6 months. We ran single-AZ during that period — technically met SLA but felt uncomfortable.

[NEGATIVE] SAP BASIS managed service as an additional cost felt like a hidden charge. Should be included at the price point NexaCloud charges.

Overall Score: 4.2/5.0 | Recommended: YES for ML-heavy workloads, CONDITIONAL for TISAX-dependent industries

2.2 Negative Experience — Central European Parcel (Prague, 7,100 employees)

Industry: Parcel Delivery | Use Case: Core platform migration | Duration: 10 months

[NEGATIVE] NexaCloud sold us on the AI platform but our workloads are not AI-heavy. We are paying for NexaAI Platform features we use less than 20% of. The pricing should be modular.

[NEGATIVE] The migration was delayed by 4 weeks due to NexaCloud SAP team being understaffed during Q4 2025 peak. Our go-live slipped from November to January — costly business disruption.

[NEGATIVE] P1 incident in Month 3: application layer issue affecting customer portal. 30-minute acknowledgement SLA was met but action plan took 5 hours. We escalated to account director.

[NEGATIVE] NexaMesh (proprietary service mesh) caused 2 integration issues with our third-party monitoring tools. Took 3 weeks to resolve. Istio would have been preferable.

[NEGATIVE] Frankfurt single-AZ was a genuine risk during our peak period. Had NexaCloud suffered an AZ-level failure we would have had full outage — unacceptable for our SLA to end customers.

What worked well:

[POSITIVE] Network performance is excellent. Sub-10ms latency to our Amsterdam office consistently.

[POSITIVE] Cost has been predictable. No billing surprises in 10 months.

[POSITIVE] NexaAI CostIntelligence dashboard is genuinely useful even for non-ML workloads.

Overall Score: 3.2/5.0 | Recommended: CONDITIONAL — ensure SAP staffing commitment contractually

2.3 Neutral Experience — Global Freight Alliance (Hamburg, 11,000 employees)

Industry: Freight Forwarding | Use Case: Full cloud transformation | Duration: 20 months

[NEUTRAL] NexaCloud has matured significantly over our 20-month engagement. First 6 months had teething issues, last 14 months have been stable and positive.

[NEUTRAL] The AI demand forecasting reduced empty truck runs by 18% — directly attributable to NexaAI platform. Real quantifiable business value.

[NEUTRAL] Annual cost saving of €1.8 million vs previous provider. NexaCloud cost management tools were key to achieving this.

[NEUTRAL] TAM model: we invested in Premium Support upgrade. The dedicated TAM model then worked well. Do not attempt Enterprise standard tier for a company our size.

[NEUTRAL] TISAX gap remains our only material concern. We do not service automotive directly but several partners require TISAX — creates procurement friction.

[NEUTRAL] The Frankfurt second AZ launched in April 2026 — we now have proper HA. First 14 months were single-AZ which was a known risk we accepted.

Overall Score: 4.0/5.0 | Recommended: YES with Premium Support and TISAX workaround plan

SECTION 3: DataVault Systems — Customer Experiences

3.1 Positive Experience — AutoParts Distribution AG (Munich, 5,400 employees)

Industry: Automotive Parts Logistics | Use Case: TISAX-compliant cloud + SAP | Duration: 28 months

[POSITIVE] DataVault was the only provider that could deliver TISAX Level 3 on Day 1 without a waiting period. For our automotive clients this was non-negotiable and DataVault delivered.

[POSITIVE] German data sovereignty: our legal team was unanimous — DataVault being the only provider with no US parent company eliminates Patriot Act/CLOUD Act risk entirely. This simplified our GDPR compliance audit.

[POSITIVE] SAP migration was the smoothest we have experienced across 3 cloud migrations in 10 years. DataVault SAP Migration Accelerator ran like clockwork. Completed in 9 weeks — fastest migration we have done.

[POSITIVE] The LogiStack platform connectors for our TMS and WMS saved approximately 8 weeks of integration development. Pre-built connectors for Manhattan Associates WMS were ready to configure on Day 1.

[POSITIVE] BSI C5 Type 2 across all facilities gives our compliance team confidence for our banking and insurance logistics clients.

[POSITIVE] Support team is small but remarkably responsive. Never waited more than 18 minutes for P1 acknowledgement. The team knows our environment intimately — we speak to the same engineers repeatedly.

Pain Points:

[NEGATIVE] Capacity constraints during Q4 peak: DataVault had to manually allocate additional capacity for our Black Friday logistics peak. Automated burst scaling was insufficient — required 48-hour advance notice.

[NEGATIVE] Kubernetes platform is generation 1. We hit limitations with our CI/CD pipeline and had to implement workarounds. Improving but not yet mature.

[NEGATIVE] No ML/AI platform beyond basic GPU rental. Our data science team had to build everything from scratch — no managed ML service.

[NEGATIVE] Operations outside Germany: our Spanish subsidiary had to use a secondary provider. DataVault has no non-German presence.

Overall Score: 4.4/5.0 | Recommended: YES for German-regulated enterprises with TISAX requirements

3.2 Negative Experience — Rhine Valley Distribution GmbH (Cologne, 2,800 employees)

Industry: FMCG Logistics | Use Case: Infrastructure migration | Duration: 12 months

[NEGATIVE] DataVault is excellent for compliance but struggles with scale. We are a mid-size logistics company and already feeling capacity pressure at 12 months. Concerned about Year 3.

[NEGATIVE] The Kubernetes platform caused real operational pain. Two incidents where custom deployments behaved differently on DataVault Kubernetes vs our staging environment. Root cause: DataVault K8s is running a modified distribution.

[NEGATIVE] No managed ML service meant we could not deliver our demand forecasting project on schedule. Had to engage a third-party ML platform — additional cost and complexity.

[NEGATIVE] Support team: excellent engineers but only 12 people on the enterprise support desk. During the major EU cloud outage in February 2026, response times degraded to 45 minutes for P2 tickets.

[NEGATIVE] Onboarding took 16 weeks — 2 weeks longer than projected. DataVault migration team is genuinely expert at SAP but less experienced with our Oracle TMS configuration.

What worked well:

[POSITIVE] Compliance depth is unmatched. Zero issues with our German banking clients regarding data sovereignty.

[POSITIVE] Cost is genuinely the lowest we have found. 5-year TCO tracking 6% below proposal.

[POSITIVE] DataVault has been transparent about limitations — they told us about K8s maturity before we signed. We accepted the risk.

Overall Score: 3.6/5.0 | Recommended: YES for compliance-first organisations, CAUTION for scale-up scenarios

3.3 Neutral Experience — Pharma Cold Chain GmbH (Frankfurt, 1,900 employees)

Industry: Pharmaceutical Logistics | Use Case: GDPR-critical data platform | Duration: 18 months

[NEUTRAL] For a pharmaceutical logistics company, DataVaults German sovereign cloud is the only defensible choice from a regulatory standpoint. Our external auditors specifically noted the absence of US parent company as a positive.

[NEUTRAL] The LogiStack cold-chain IoT connectors for Sensitech sensors worked first time. Saved our IoT team significant integration effort.

[NEUTRAL] Scale is our ongoing concern. We are a smaller company and DataVault is right-sized for us now. If we grow 3x in 3 years we may outgrow DataVault capacity in Munich.

[NEUTRAL] Support response is personal and knowledgeable — we know the engineers by name. But it is not a 24/7 globally distributed team. Weekend P2 responses are slower.

[NEUTRAL] Pricing: genuinely competitive. We are paying 22% less than our previous private cloud provider for equivalent capacity with better compliance.

Overall Score: 4.2/5.0 | Recommended: YES for regulated, compliance-first organisations under 15,000 employees

SECTION 4: SkyBridge Cloud — Customer Experiences

4.1 Positive Experience — European Trade Logistics BV (Amsterdam, 6,200 employees)

Industry: Trade Logistics | Use Case: Hybrid cloud with on-premise SAP | Duration: 22 months

[POSITIVE] SkyBridge Connect is genuinely exceptional for hybrid architecture. Sub-3ms latency between our Amsterdam data centre and SkyBridge Amsterdam-1. Workload migration between on-premise and cloud is transparent to applications.

[POSITIVE] The hybrid model was exactly what we needed for a phased migration approach. We moved 40% of workloads in Year 1 and plan 40% more in Year 2. SkyBridge Connect makes this operationally smooth.

[POSITIVE] Multi-cloud capability with Azure AKS federation proved valuable when we acquired a company running Azure — we federated their cluster into our SkyBridge environment within 2 weeks.

[POSITIVE] Datadog integration included: significant value — our DevOps team uses Datadog heavily and having it pre-integrated saved 3 months of instrumentation work.

Pain Points:

[NEGATIVE] P1 SLA of 1 hour on standard support is too long. We had one P1 incident where the hour wait for acknowledgement caused significant business anxiety even though the incident was eventually resolved in 3 hours total.

[NEGATIVE] TISAX gap: we lost the Volkswagen logistics contract because SkyBridge cannot provide TISAX certification. Cost us approximately €2.4 million annually. This is the single biggest commercial risk of choosing SkyBridge.

[NEGATIVE] BSI C5 Frankfurt still in progress: our German banking clients require BSI C5 and we have had to route their data through Amsterdam with higher latency as a workaround.

[NEGATIVE] SAP node specification (8TB RAM) was insufficient for our Year 2 growth. Required a node upgrade in Month 18 — additional cost of €180,000 not in original budget.

[NEGATIVE] Primary region Amsterdam: 8ms latency to Frankfurt is noticeable for latency-sensitive applications. Not critical but measurable.

Overall Score: 3.8/5.0 | Recommended: CONDITIONAL — excellent for hybrid architecture, poor for TISAX/BSI-C5 regulated environments

4.2 Negative Experience — Benelux Distribution Group (Brussels, 4,100 employees)

Industry: Distribution | Use Case: Full cloud migration | Duration: 15 months

[NEGATIVE] The migration took 20 weeks — 2 weeks longer than the 18-week estimate due to SAP BASIS configuration complexity. SkyBridge SAP team is competent but smaller than CloudPrime or DataVault.

[NEGATIVE] Year 1 cost came in at €7.1 million — slightly above the proposal due to SAP BASIS managed service (€110,000) which we initially did not budget for correctly.

[NEGATIVE] Support standard tier: P1 1-hour response is genuinely inadequate for production systems. We upgraded to Premium Support (€180,000 additional) in Month 3 after one difficult incident.

[NEGATIVE] SkyBridge Connect had an unexpected maintenance window in Month 8 that was not communicated 48 hours in advance as contractually required. Caused 40 minutes of degraded hybrid connectivity.

[NEGATIVE] No TISAX, no BSI C5 Frankfurt: two of our 12 largest clients asked about these certifications during their annual supplier review. We had to provide extensive compensating controls documentation.

What worked well:

[POSITIVE] SkyBridge Connect is the best hybrid connectivity product we have used. The latency and reliability are genuinely impressive.

[POSITIVE] Network performance overall is excellent — SkyBridge Amsterdam infrastructure is clearly high quality.

[POSITIVE] After upgrading to Premium Support, P1 response improved to average 18 minutes — acceptable.

Overall Score: 3.3/5.0 | Recommended: CONDITIONAL — budget for Premium Support and SAP BASIS additional costs

4.3 Neutral Experience — North Sea Logistics AS (Oslo, 3,400 employees)

Industry: Maritime Logistics | Use Case: Application platform | Duration: 16 months

[NEUTRAL] SkyBridge is a solid mid-tier provider. Not the cheapest, not the most compliant, not the most performant — but consistently adequate across all dimensions.

[NEUTRAL] The multi-cloud capability was our primary reason for choosing SkyBridge. We have workloads on Azure and having SkyKube federation capability is genuinely useful.

[NEUTRAL] P1 response on Premium Support: average 17 minutes across 16 months. 3 P1 incidents all resolved within 4 hours.

[NEUTRAL] Cost: Year 1 was 4% above proposal due to egress charges we had not fully modelled. Not SkyBridge fault — our data transfer patterns were underestimated.

[NEUTRAL] No TISAX is a limitation but not critical for maritime logistics. BSI C5 gap matters for our German subsidiary — currently routing German data to Amsterdam as workaround.

Overall Score: 3.9/5.0 | Recommended: YES for multi-cloud hybrid strategies, AVOID for TISAX/regulated German workloads

SECTION 5: OmegaCloud Enterprise — Customer Experiences

5.1 Positive Experience — Pacific Rim Logistics EU (Hamburg, 8,800 employees)

Industry: Ocean Freight | Use Case: Global platform, EU primary | Duration: 19 months

[POSITIVE] OmegaCloud global reach is unmatched. We operate across 18 countries and having a single provider cover EU, APAC, and Americas infrastructure simplifies our operations significantly.

[POSITIVE] OmegaCompute X4 performance is the best we have tested. Our route optimisation algorithms (previously 4-hour batch) now complete in 47 minutes on OmegaCloud GPU clusters.

[POSITIVE] P1 response: 15 minutes consistently. Global NOC model means coverage is genuinely 24/7 across time zones — not the same team handling European midnight as US midnight.

[POSITIVE] Price is the best we have found at our scale. 5-year TCO came in 11% below proposal due to OmegaAI FinOps identifying optimisation opportunities.

[POSITIVE] Container platform (OmegaKube) is the most feature-rich we have used. The AI-assisted right-sizing alone reduced our compute bill by 28% in Month 2.

Pain Points:

[NEGATIVE] GDPR DPA governed by Singapore law: our German DPO raised this as a concern. We engaged external legal counsel who concluded the risk was manageable but required additional contractual protections. Cost €45,000 in legal fees.

[NEGATIVE] CLOUD Act: we briefed our board on the US CLOUD Act applicability. Board approved proceeding with OmegaCloud but required quarterly GDPR compliance attestations — additional governance overhead.

[NEGATIVE] No BSI C5 and no TISAX: two German enterprise clients specifically asked about BSI C5. We lost one contract as a result. OmegaCloud has no roadmap for these certifications.

[NEGATIVE] Support ticket data processed in Singapore: our DPO flagged this as a potential GDPR Article 28 issue. OmegaCloud provided a technical solution (UK-based ticketing option) after 3 months of escalation.

[NEGATIVE] SAP experience in EU is limited — only 12 EU S/4HANA migrations. Our migration ran 3 weeks over the 15-week estimate. The OmegaMigrate AI tool is innovative but less refined than CloudPrime or DataVault SAP specialists.

Overall Score: 4.0/5.0 | Recommended: YES for global non-regulated workloads, CAUTION for German-regulated or TISAX-dependent use cases

5.2 Negative Experience — Deutsche Supply Chain AG (Dusseldorf, 5,600 employees)

Industry: Supply Chain Management | Use Case: Core platform migration | Duration: 11 months

[NEGATIVE] We terminated our OmegaCloud contract after 11 months. Primary reason: GDPR compliance could not be adequately demonstrated to our external auditors. The Singapore-law DPA was unacceptable to our auditor.

[NEGATIVE] Second reason: two of our five largest clients (both German regulated enterprises) conducted supplier audits and rejected OmegaCloud on BSI C5 grounds. This represented 34% of our revenue under management.

[NEGATIVE] The CLOUD Act issue: our legal team determined that OmegaCloud cannot contractually guarantee data will not be accessed under US law. This was unacceptable for our financial services logistics clients.

[NEGATIVE] Technical performance was genuinely excellent — OmegaCompute and OmegaKube are best-in-class. If compliance was not a factor we would have stayed.

[NEGATIVE] Exit experience: OmegaCloud provided promised data export and 90-day migration support. No issues with the exit process itself.

[NEGATIVE] Cost was lowest in the market. We were saving €1.1 million/year vs previous provider. The compliance failure was costly — migration to CloudPrime cost €420,000 in professional services.

Overall Score: 2.8/5.0 | NOT RECOMMENDED for German-regulated enterprises, financial services, or clients requiring BSI C5/TISAX

5.3 Neutral Experience — Iberian Logistics Partners (Madrid, 4,200 employees)

Industry: Iberian Freight | Use Case: Regional cloud infrastructure | Duration: 14 months

[NEUTRAL] OmegaCloud works very well for our Spanish and Portuguese operations. No GDPR issues flagged by Spanish AEPD — the jurisdiction risk may be more acute for German operations.

[NEUTRAL] Price-to-performance ratio is best in market. OmegaAI OptiScale reduced our compute costs by 34% from Month 2 onward.

[NEUTRAL] P1 support: excellent. Madrid time zone coverage from the global NOC is genuinely 24/7 in practice.

[NEUTRAL] For German workloads we do not use OmegaCloud. Our Berlin subsidiary uses DataVault. The compliance risk for German-regulated data is real and we self-segregated.

[NEUTRAL] The OmegaMesh proprietary service mesh caused minor friction during onboarding — our team had Istio experience and had to retrain. 3-week learning curve.

[NEUTRAL] Egress fees after 10TB/month free tier were higher than budgeted — €0.08/GB adds up at our data volumes. Recommend careful modelling before signing.

Overall Score: 4.1/5.0 | Recommended: YES for non-German EU operations, CONDITIONAL with legal review for German workloads

SUMMARY: Customer Experience Scores Across All Vendors

CloudPrime	4.0/5.0	4.2/5.0	4.6/5.0	4.8/5.0	YES
NexaCloud	3.8/5.0	3.6/5.0	3.8/5.0	3.4/5.0	CONDITIONAL
DataVault	4.1/5.0	4.0/5.0	4.5/5.0	5.0/5.0	YES (regulated)
SkyBridge	3.7/5.0	3.2/5.0	3.4/5.0	2.8/5.0	CONDITIONAL
OmegaCloud	3.6/5.0	4.1/5.0	3.2/5.0	2.2/5.0	CAUTION (German)

Key Findings Summary

- CloudPrime: strongest overall for German enterprises. TISAX Level 3, BSI C5, excellent SAP track record. Only concern: TAM continuity risk — contractually protect.
- NexaCloud: best AI/ML platform. TISAX gap is material for automotive logistics. Frankfurt single-AZ resolved April 2026. Recommend Premium Support upgrade.
- DataVault: best compliance depth for German sovereign requirements. Scale constraints at >15,000 employees. Kubernetes immaturity is real. Best choice for highly regulated smaller enterprises.
- SkyBridge: best hybrid connectivity. TISAX and BSI C5 Frankfurt gaps are material for Meridian. Primary region Amsterdam creates latency and compliance routing complexity.
- OmegaCloud: best global reach and price-to-performance. GDPR DPA Singapore law, CLOUD Act exposure, zero BSI C5/TISAX roadmap are disqualifying factors for German-regulated enterprises per multiple client testimonies.
